

Amit Kumar

Senior Engineering Manager | +91-8826047975 | [linkedin.com/in/amitk0mar](https://www.linkedin.com/in/amitk0mar) | bouncyinbox@gmail.com | Bangalore, India

Summary

Senior Engineering Manager with 13+ years of experience building and scaling engineering organizations across web, mobile, and backend platforms. Hands-on technical depth in frontend, mobile platforms, and high-scale microservices, with a consistent focus on platform reliability, developer productivity, and delivery execution at scale.

Skills

Technical Breadth

- Web & Mobile : JavaScript, TypeScript, React, React Native, Angular, Hybrid Mobile Apps, Apps, PWA & Offline-First Architecture, Rendering Strategies (SSR, CSR, SSG), Core Web Vitals, Web Performance, Micro-Frontend Architecture, Frontend Build Tooling & Bundlers, Component Libraries
- Backend : Node.js, Golang, Microservices, Distributed Systems, API Design Pattern(Rest API, API Gateway, BFF), CDN, Caching Strategy, High-Scale Platforms, Service reliability patterns, AWS, Container orchestration (Docker, Kubernetes), Elasticsearch, RDBMS (MySQL/PostgreSQL), NoSQL (MongoDB, Redis, Aerospike)
- Observability & Reliability - Grafana, Prometheus, Firebase Performance, SLOs / SLAs, Incident Management, On-Call Practices, RCA & Post-Mortems, Alerting & Monitoring Pipelines, Circuit Breakers, Rate Limiting
- AI & emerging - Gen AI, AI-assisted developer tooling
- Domain Expertise: E-commerce, Payments, Travel, Marketplace platforms, High-scale consumer internet, B2C

Engineering Leadership

- Engineering Strategy, Technical Roadmap Planning, OKR Planning, Org Design, Headcount Planning, Hiring & Talent Management, Performance Management, Career Development & Mentorship, Stakeholder Management, Cross Functional Alignment, Agile / Scrum, Program Delivery, People Management, 1:1 Coaching, Performance Reviews, Promotions, Feedback Culture

Work Experience

Nielsen, Senior Engineering Manager

Jun 2025 – Feb 2026

- Took over a 32-member cross-functional engineering team across South Korea, US, and India (4 cities) - previously led by a Director of Engineering for 7+ years
- Stabilized the team through a leadership transition - introduced structured planning, clarified ownership boundaries, and established cross-functional engagement models. Hired 3 engineers during this period
- Reorganized the team to align with the Digital & AI vertical - mapped 6 apps and 4 services, transitioned 3 apps and 5 engineers to appropriate verticals.
- Identified a Sev-1 data quality issue on the iOS metering app undetected for 15 months - impacting 2 out of 20 core signals (UserAgent and Classification data) across nearly 100% of global clients. Drove root cause analysis and coordinated the fix across multiple teams.
- Drove adoption of AI-assisted developer tooling across teams, personally shipped an enhancement in crawler using LLM integrated runtime loops (a self-healing crawler)

Myntra, Senior Engineering Manager

Apr 2022 – Jun 2025

- Led an 18-member full-stack engineering org within the Discovery domain, owning high-traffic customer-facing surfaces: PDP, Size&Fit, UGC, Growth(3D, Virtual TryON, FWD, Hyperlocal, AI Looks), Recommendations, Search Experience.
- Drove PDP migration to the Layout Engine framework reduced TTFD by ~50% (5.1s → 2.5s), significantly improving scalability and release velocity for one of Myntra's highest-traffic pages.
- Scaled and optimized backend services handling 2M+ TPS, achieved ~30% infrastructure cost savings through systematic benchmarking, right-sizing, and autoscaling strategies.
- Established robust performance and reliability practices (Firebase metrics, profiling, on-call rotations, RCA culture), resulting in ~70% reduction in production incidents.
- Partnered cross-functionally with Product, UX, TPM, and Platform teams to deliver complex, high-impact features on time

Snapdeal, Engineering Manager (SE II -> SSE -> Tech Lead -> EM)

Aug 2014 – Mar 2022

- During Snapdeal 2.0 restructuring (80% org-wide workforce reduction), stepped up as one of few senior engineers retained; rebuilt the buyer engineering team from scratch, maintained delivery continuity, and progressed from Senior Engineer to Engineering Manager over the following years.
- Owned end-to-end Buyer Experience engineering across Discovery, Post-Order, and Payments domains, led development of Cart, Checkout, Payments, PWA, and real-time monitoring systems.
- Drove frontend modernization initiatives, improving performance, reliability, and developer productivity across web platforms.

Earlier Experience

RedBus - Software Engineer | Adjetter - Software Engineer

Sep 2012 – Jul 2014

- Built consumer-facing web and mobile web applications including search result pages, payment flows, and hotel booking platforms from the ground up.
- Developed reusable UI libraries in JavaScript; led end-to-end development of an e-commerce platform and a CMS web app.
- Built and launched the Hotels vertical for RedBus, expanding the platform's service offerings.

Education

Bachelor of Technology - Information Technology

- Poornima College of Engineering, Jaipur | Aug 2008 – Jun 2012
