SUMMARY

Senior Engineering Manager with 13+ years scaling consumer internet platforms across e-commerce, travel, and marketplaces. Owned high-traffic surfaces and business-critical platforms (PDP at Myntra, buyer experience at Snapdeal) with measurable impact on conversion, reliability, and cost. Led teams through restructurings, leadership transitions, and multi-geo coordination. Hands-on across frontend, mobile, and microservices, with recent work in AI-assisted tooling and LLM-integrated systems.

EXPERIENCE

Senior Engineering Manager · Nielsen

Jun 2025 – Feb 2026 · Bangalore, India

- Took over a 32-member cross-functional engineering team across South Korea, US, and India (4 cities) — previously led by a Director of Engineering for 7+ years.
- Stabilized the team through a leadership transition — introduced structured planning, clarified ownership boundaries, and established cross-functional engagement models. Hired 3 engineers during this period.
- Reorganized the team to align with the Digital & AI vertical — mapped 6 apps and 4 services, transitioned 3 apps and 5 engineers to appropriate verticals.
- Identified a Sev-1 data quality issue on the iOS metering app undetected for 15 months — impacting 2 out of 20 core signals across nearly 100% of global clients. Drove root cause analysis and coordinated the fix across multiple teams.
- Drove adoption of AI-assisted developer tooling across teams, personally shipped an enhancement in crawler using LLM integrated runtime loops (a self-healing crawler).

Senior Engineering Manager · Myntra

Apr 2022 – Jun 2025 · Bangalore, India

- Led an 18-member full-stack developers within storefront engineering, owning high-traffic customer-facing surfaces: PDP, Size&Fit, UGC, Growth (3D, Virtual TryOn, FWD, Hyperlocal, AI Looks), Recommendations, Search Experience.
- Owned PDP product charter (~50% of Myntra traffic lands on PDP) - collaborated with 8-9 product leaders and multiple engineering teams to balance cross-sell, feature education, and core conversion on the highest-stakes surface in the funnel.
- Owned the Style microservice powering PDP - 60+ internal clients, 8-10 upstream dependencies, business-critical path where downtime took orders to zero; drove reliability, scalability, and stakeholder coordination across consumers.
- Led architecture and design of Tag service for social-proof nudges (city-first buyer, units sold, low-stock urgency) across PDP and key funnel touchpoints - lifted PDP-to-Cart by 4%.
- Drove PDP migration to the Layout Engine framework — reduced TTFD by ~50% (5.1s → 2.5s), significantly improving scalability and release velocity.
- Stabilized Style service (P0, business-critical) - introduced service-specific dashboards, granular alerts, VLT-based capacity planning, HPA for cost-aware scaling, and simplified architecture by removing an inconsistent cache pipeline; eliminated recurring P0 escalations during peak/deloys.
- Established robust performance and reliability practices (Firebase metrics, profiling, on-call rotations, RCA culture), resulting in ~70% reduction in production incidents.
- Partnered cross-functionally with Product, UX, TPM, and Platform teams to deliver complex, high-impact features on time.

Engineering Manager (SE II → SSE → Tech Lead → EM) · Snapdeal

Aug 2014 – Mar 2022 · New Delhi, India

- Retained through Snapdeal 2.0 restructuring (80% workforce reduction) rebuilt buyer web/mobile engineering team from 2 to 14 and sustained product delivery through the transition.
- Influenced architecture and engineering standards across web teams; mentored engineers into senior and tech lead roles, several now leading teams at top product companies.
- Built and led the BFF (Backend-for-Frontend) layer for dynamic, personalized layouts in collaboration with cross-functional engineering teams - unlocked rapid A/B testing and personalization for product and business teams without frontend release cycles.
- Early-adopter implementation of AMP, Service Workers (web push), and One Tap Sign-in in collaboration with Google - AMP cut PLP load time by ~50% and lifted mobile web conversion by ~10%, web push drove ~15% re-engagement uplift, and One Tap reduced signin friction with ~20% higher signin conversion.
- Owned web & mobile platform observability and performance - Built in-house RUM and JS error/network logging libraries with dashboards and alerts; moved team from synthetic to real-user monitoring, established perf culture, drove significant page load improvements, cut customer escalations, and surfaced browser-specific conversion issues.

Software Engineer · RedBus / Adjetter

Sep 2012 – Jul 2014 · Bangalore, India

- Built and owned a customer support web app replacing email/phone workflows for cancellation, refund, and post-order queries - cut AHT by ~50%, brought refund TAT from multi-day to same-day, and deflected enough operational load from engineering to redeploy engineers from support to product development.
- Built reusable component libraries and led revamp for web and mobile web - improved page load ~30-40% and enabled white-label apps for travel partners.
- Built hotel booking flows (details + customer info) on the bus platform post Ibibo acquisition enabled hotel cross-sell to bus customers and expanded RedBus into multi-category travel.

SKILLS

Backend: Golang, Node.js, Microservices, Distributed Systems, API Design Patterns (gRPC, REST API, API Gateway, BFF), CDN, Caching Strategy, High-Scale Platforms, Service Reliability Patterns, AWS, Elasticsearch, RDBMS (MySQL, PostgreSQL), NoSQL (MongoDB, Redis, Aerospike)

Web & Mobile: JavaScript, TypeScript, React, React Native, Android, iOS, Hybrid Mobile Apps, PWA, Rendering Strategies, Core Web Vitals, Web Performance, Frontend Architecture, Frontend Build Tooling & Bundlers, Component Libraries

Observability & Reliability: Grafana, Prometheus, Firebase Performance, SLOs / SLAs, Incident Management, On-Call Practices, RCA & Post-Mortems, Alerting & Monitoring Pipelines, Circuit Breakers, Rate Limiting

AI & Emerging: Generative AI, AI-Assisted Developer Tooling, LLM Integration

Domain Expertise: E-commerce, Travel, Marketplace Platforms, Data, Analytics, and Market Research, Consumer Internet Products, B2C

Engineering Leadership: Engineering Strategy, Technical Roadmap Planning, Org Design, Hiring & Talent Management, Performance Management, OKR Planning, Headcount Planning, Career Development & Mentorship, Stakeholder Management, Cross-Functional Alignment, Agile / Scrum, Program Delivery, People Management, 1:1 Coaching

EDUCATION

Bachelor of Technology, Information Technology · Poornima College of Engineering

Aug 2008 – Jun 2012 · Jaipur, India

Affiliated with Rajasthan Technical University
